Devansh Lamba

AI · Backend · Automation Engineer

Pune, India · open to Pune, Bangalore or remote devansh@devanshlamba.in
linkedin.com/in/devanshlamba github.com/devanshlamba devanshlamba.in

OPEN TO WORK

Backend engineer shipping production AI systems: multi-tenant SaaS, RAG, agentic tool-calling and API security. Seeking full-time or internship roles in AI / backend engineering.

FOCUS Agentic AI · RAG / pgvector · Multi-tenant SaaS · LLM provider abstraction · API security · Cost-aware LLM design

SELECTED WORK

Siliqo Agentic Customer Support API Platform

Live site · Code private · walkthrough on request

Solo builder · Sep 2026 - Present · **Live**

Python · PostgreSQL + pgvector · RAG · Multi-tenant SaaS

- Shipped solo a multi-tenant agentic support API (7,400+ LOC, 38 endpoints, 68 passing tests) with RAG, tool-calling and automatic human escalation, embedded via a zero-build JS widget streaming over SSE.
- Removed LLM vendor lock-in: one streaming layer over OpenAI, Anthropic and Google, switching providers by config.
- Secured tenants with Stripe-style two-key auth (domain-locked public + secret key) and AES-256-GCM encryption.
- Hardened tool-calling with HMAC-signed webhooks, SSRF protection and a bounded loop; RAG on pgvector (HNSW).

Vayris Open-Source AI Agent for Windows

GitHub · Website

Independent builder · Aug 2026 - Present · **Open source · Apache 2.0**

Electron · React · TypeScript · Agentic Routing · MCP

- Tri-path routing: deterministic OS commands skip the LLM; fast and deep agentic paths share one tool registry.
- Grounded the agent in local context with RAG, and added guardrails that block unsafe or irreversible actions.
- Released open source (Apache 2.0) with MCP support; runs on the user's own API key or a fully local model.

STARTUPS

Ordo Hyperlocal Quick-Commerce Platform

Landing site

Founder & developer · Jan 2025 - Present · **In development**

Node.js · React Native · MongoDB · REST APIs

- Leads architecture and the full-stack build of a platform linking local retailers, customers and riders.
- Building secure REST APIs (auth, orders, inventory) and a React Native app with real-time order tracking.

LeadLoop Outsourced Digital Department for Restaurants

Code private · walkthrough on request

Founder & developer · **In development**

Next.js · Docker · Supabase (PostgreSQL) · Monorepo · Multi-tenant · LLM integration

- Designing a restaurant's digital department: bookings, orders, payments, marketing and revenue in one dashboard.
- Cost-aware by design: plain code first, the cheapest suitable LLM only where needed; tier-based features.

ALSO BUILT

CloudTasks `Learning build` · OpenTofu on Azure, Docker + Caddy HTTPS, argon2id, CSRF, rate limiting, 41 tests. Live demo · GitHub

TECHNICAL SKILLS

LANGUAGES Java, JavaScript, Python, SQL

BACKEND & APIS Spring Boot, Node.js, Express.js, REST API Design, SSE

AI / ML LLM APIs (OpenAI, Anthropic, Google), RAG, Multi-Agent Systems, Prompt Engineering

DATABASES & FRONTEND PostgreSQL, pgvector, MongoDB, MySQL, React.js, React Native, HTML, CSS

SECURITY, INFRA & TOOLS AES-256, JWT, HMAC webhooks, Docker, Git, GitHub, Postman, Linux, Render, Vercel, Supabase

EDUCATION & CERTIFICATIONS

EDUCATION B.Tech, Computer Engineering, Bharati Vidyapeeth College of Engineering · Aug 2023 - Present · CGPA: 8.39/10

CERTIFICATIONS Agentic AI Fundamentals (Oracle) · DSA (Apna College) · Full Stack Web Development (Chai aur Code / Udemy)
