Pune, Maharashtra, India | +91 7692968555 | devansh@devanshlamba.in | [LinkedIn](#) | [Portfolio](#) | [GitHub](#)

EDUCATION

Bharati Vidyapeeth College of Engineering

Bachelor of Technology in Computer Engineering

- CGPA: 8.39/10

Pune, Maharashtra

Aug 2023 - Present

PROJECTS

Siliqo – Agentic Customer Support API

Python, PostgreSQL, pgvector, REST/SSE

Live Demo | [GitHub](#)

Sep 2026 - Present

- Architected a multi-tenant backend (**7,400+ LOC, 38 endpoints, 68 passing tests**) powering an embeddable AI support widget with RAG, agentic tool-calling, and automatic human escalation.
- Built a provider-agnostic LLM abstraction layer unifying OpenAI, Anthropic, and Google behind a single streaming interface, enabling provider switches through configuration alone.
- Designed a two-key API authentication model (domain-locked public key + secret key) modeled on Stripe/Razorpay's architecture, with AES-256-GCM credential encryption using versioned, tenant-bound keys.
- Built a RAG pipeline on PostgreSQL + pgvector with HNSW indexing, and implemented agentic tool-calling via HMAC-signed webhooks with SSRF protection and a bounded execution loop; shipped an accompanying zero-build JavaScript widget verified with automated browser testing.

Vayris AI – Local Multi-Agent Personal Assistant

Python, LLM APIs, RAG

Live Site | [GitHub](#)

Aug 2026 - Present

- Built a locally-run, open-source (Apache 2.0) multi-agent personal assistant that executes system-level operations through specialized planning and execution agents.
- Designed a Tri-Path routing architecture (deterministic OS-command path, lightweight conversational LLM, and deep agentic multi-step reasoning) sharing a unified tool registry, with MCP integration for extending capabilities.
- Integrated Retrieval-Augmented Generation (RAG) to ground responses in local context, with guardrails constraining agent actions to prevent unsafe or irreversible operations.
- Supports either a user-supplied LLM API key or a fully local model; ships as a monorepo with an Electron desktop client and a React web client.

ORDO – Hyperlocal Quick Commerce Platform

Founder & Developer – Startup, In Development | Node.js, React Native, MongoDB

Jan 2025 - Present

- Founded ORDO, a hyperlocal quick-commerce startup connecting local retailers, customers, and delivery partners, and currently lead its architecture and full-stack development.
- Building secure REST APIs for authentication, order management, and inventory operations (validated with Postman), scalable backend workflows for order processing and delivery tracking, and a React Native app with real-time order status updates.

TECHNICAL SKILLS

Languages: Java, JavaScript, Python, SQL

Backend & APIs: Spring Boot, Node.js, Express.js, REST API Design, Server-Sent Events (SSE)

AI / ML: LLM APIs (OpenAI, Anthropic, Google), Retrieval-Augmented Generation (RAG), Multi-Agent Systems, Prompt Engineering

Databases & Frontend: PostgreSQL, pgvector, MongoDB, MySQL, React.js, React Native, HTML, CSS

Security, Infra & Tools: AES-256 Encryption, JWT Auth, HMAC-Signed Webhooks, Docker, Git, GitHub, Postman, Linux, Render, Vercel, Supabase

CERTIFICATIONS

Agentic AI Fundamentals – Oracle

Data Structures & Algorithms – Apna College

Full Stack Web Development – Chai aur Code / Udemy

ACHIEVEMENTS & LEADERSHIP

- **200+ LeetCode Problems** – Solved 200+ problems focused on Data Structures & Algorithms.
- **Open-Source Project** – Created and released Vayris AI, a local multi-agent personal assistant, under the Apache 2.0 license.
- **Founder & Developer – ORDO** – Founded and currently lead development of a hyperlocal quick-commerce startup connecting local retailers, customers, and delivery partners.
