Devansh Lamba

AI · Backend · Automation Engineer

Pune, India · open to Pune, Bangalore or remote devansh@devanshlamba.in
linkedin.com/in/devanshlamba github.com/devanshlamba devanshlamba.in

OPEN TO WORK

Backend engineer who ships systems end to end. Built Siliqo solo (Agentic Customer Support API Platform: 7,400+ LOC, 38 endpoints, 68 passing tests); builds Vayris (Open-Source AI Agent for Windows, Apache 2.0); and founded Ordo (Hyperlocal Quick-Commerce Platform) and LeadLoop (Outsourced Digital Department for Restaurants). Works across RAG, agentic tool-calling, provider-agnostic LLM layers, multi-tenant SaaS, API security and cloud deployment. Looking for a job or an internship as an AI, backend and automation engineer.

SELECTED WORK

Siliqo Agentic Customer Support API Platform

Live site · Code private · walkthrough on request

Solo builder · Sep 2026 - Present · **Live**

Python · PostgreSQL + pgvector · RAG · Multi-tenant SaaS

- Architected a multi-tenant backend (7,400+ LOC, 38 endpoints, 68 passing tests) powering an embeddable AI support widget with RAG, agentic tool-calling, and automatic human escalation.
- Built a provider-agnostic LLM abstraction layer unifying OpenAI, Anthropic, and Google behind a single streaming interface, so switching providers is a configuration change.
- Designed a two-key API authentication model (domain-locked public key plus secret key) modeled on Stripe and Razorpay, with AES-256-GCM credential encryption using versioned, tenant-bound keys.
- Built the RAG pipeline on PostgreSQL + pgvector with HNSW indexing, and agentic tool-calling through HMAC-signed webhooks with SSRF protection and a bounded execution loop.
- Shipped a zero-build JavaScript widget, verified with automated browser testing, streaming responses over REST and Server-Sent Events (SSE).

Vayris Open-Source AI Agent for Windows

GitHub · Website

Independent builder · Aug 2026 - Present · **Open source · Apache 2.0**

Electron · React · TypeScript · Agentic Routing · MCP

- Built a locally run, open-source (Apache 2.0) multi-agent personal assistant that executes system-level operations through specialized planning and execution agents, written in Python with LLM APIs.
- Designed a tri-path routing architecture (a deterministic OS-command path, a lightweight conversational LLM, and deep agentic multi-step reasoning) sharing one unified tool registry, with MCP integration for extending capabilities.
- Integrated retrieval-augmented generation (RAG) to ground responses in local context, with guardrails that stop the agent taking unsafe or irreversible actions.
- Runs on either a user-supplied LLM API key or a fully local model, and ships as a monorepo with an Electron desktop client and a React web client.

Ordo Hyperlocal Quick-Commerce Platform

Landing site

Founder & developer · Jan 2025 - Present · **In development**

Node.js · React Native · MongoDB · REST APIs

- Founded Ordo, a hyperlocal quick-commerce startup connecting local retailers, customers, and delivery partners, launching in Pune, and leads its architecture and full-stack development.
- Building secure REST APIs for authentication, order management, and inventory operations, validated with Postman.
- Building backend workflows for order processing and delivery tracking, and a React Native app with real-time order status updates.

LeadLoop Outsourced Digital Department for Restaurants — Code private · walkthrough on request

Founder & developer · **In development**

Next.js · Docker · Supabase (PostgreSQL) · Monorepo · Multi-tenant · LLM integration

- Handles a restaurant's table bookings, food orders, payments, marketing and daily revenue from a single dashboard, with customer offers and monthly analysis; it deliberately leaves out inventory and staff management.
- Multi-tenant by design: every restaurant runs on one shared template, and features unlock according to its subscription tier.
- Monorepo with a Next.js dashboard and a separate Dockerised core service, on Supabase (PostgreSQL).
- Cost-aware: whatever plain code can do is done by code, and the cheapest suitable LLM is used only where it is needed, which keeps running costs low.
- Foundation built and tagged, with docs written at every build phase so anyone can join and contribute.

Planned, not shipped: A WhatsApp ordering agent; Voice and AI-call ordering in higher tiers; Online restaurant billing as the entry product.

CloudTasks Task Tracker on an Azure Linux VM — Live demo (login required) · GitHub

· **Learning build**

FastAPI · SQLite · Docker · Caddy · Azure · OpenTofu · Cloudflare DNS

- A college PBL experiment: a task tracker with a pastel UI and a live VM status panel, running 24/7 on a small Arm Linux VM in Azure and covered by 41 automated tests.
- Provisioning a small Arm Linux VM on Azure with OpenTofu and CLI scripts — NSG rules, a static public IP, and keeping it inside student credit.
- Packaging the app with Docker and keeping it on an internal network behind Caddy.

TECHNICAL SKILLS

LANGUAGES Java, JavaScript, Python, SQL

BACKEND & APIS Spring Boot, Node.js, Express.js, REST API Design, Server-Sent Events (SSE)

AI / ML LLM APIs (OpenAI, Anthropic, Google), Retrieval-Augmented Generation (RAG), Multi-Agent Systems, Prompt Engineering

DATABASES & FRONTEND PostgreSQL, pgvector, MongoDB, MySQL, React.js, React Native, HTML, CSS

SECURITY, INFRA & TOOLS AES-256 Encryption, JWT Auth, HMAC-Signed Webhooks, Docker, Git, GitHub, Postman, Linux, Render, Vercel, Supabase

EDUCATION

Bachelor of Technology in Computer Engineering

Bharati Vidyapeeth College of Engineering, Pune, Maharashtra

Aug 2023 - Present · CGPA: 8.39/10

CERTIFICATIONS

- Agentic AI Fundamentals · Oracle
- Data Structures & Algorithms · Apna College
- Full Stack Web Development · Chai aur Code / Udemy

ACHIEVEMENTS

- **200+ LeetCode problems**: Solved 200+ problems focused on data structures and algorithms.
- **Open-source release**: Created and released Vayris, a local multi-agent personal assistant, under the Apache 2.0 license.
- **Founder of Ordo**: Founded and leads development of Ordo, a hyperlocal quick-commerce startup connecting local retailers, customers, and delivery partners.
